Abstract (en)
[origin: EP1035241A1] The outside of the rim (8) of an open-end spinning rotor carries identification markings (9), e.g. lettering or a bar code produced by laser or by etching, that are placed to be visible when the spinning box is opened without requiring the use of tools by the operator. At least two markings are arranged around the circumference so that they are completely visible in any angular position.
