Abstract (en)
[origin: EP1035308A1] The drive for the cooling air cleaner is energized in dependence upon the measured value of a sensor(22,24). The suction casing(8) and/or cover plate(13) by switching of the suction device is rotatable by gravity force or by a motorized control into a position covering an area allocated to the lower section of the filter unit(7). The suction casing in a section running in the direction of the rotational axis is angular in design and facing the rotational axis is rectangular.
