Abstract (en)

[origin: EP1035390A1] A control unit (9) is driven on the basis of data that are indicative of chemical-physical characteristics of the items that are stored for preservation in a refrigerated compartment (4), as well as on the basis of operating parameters that are detected in the same compartment. The unit (9) periodically combines such data and such parameters so as to correspondingly indicate for each such item, on a display (11), a respective expiry date. <IMAGE>
