Abstract (en)

A wide-mouthed pouch which has a small volume in a condition where any contents are not contained, and which can easily collect sample water or the like in water examination is provided. As a wide-mouthed pouch for this purpose, used is a lid holding 2 having a detachable lid 22 at one end, and an opening end on the other end side, and configured by a resin molded product having a substantially cylindrical shape as a whole is attached in a fluid-tight manner to an opening portion 1a of a bag-like freestanding flexible container 1 including the opening portion at one end. A bore diameter of the lid holding member is set to be 35 mm. Therefore, the work of collecting water into the flexible container 1 is facilitated. In a condition where the lid holding member 2 is inserted into the opening portion 1a of the container 1, a band 3 is tightened from the outside of the container 1, so as to perform integration. With this configuration, a required space in an unused condition is reduced, and such a usage as that the flexible container 1 is disposable and the lid holding member 2 is recycled can be realized. Thus, the resources saving and the cost reduction are attained. <IMAGE>
