Abstract (en)

An unhanded bottom hinge assembly for a closure. It comprises a pin mounted on a pin support by which the pin can be secured to a frame of an opening and a hinge. The hinge has a barrel open at both ends for accepting the pin, a support by which the hinge can be attached to a sash and a pivot attaching the barrel to the support such that the barrel can be rotated through 180 DEG with respect to the support. This allows the bottom hinge assembly to be configured to provide a left or right handed opening sash. <IMAGE>
