Abstract (en)
[origin: EP1036908A2] The door panel has inner and outer sheets (5,6) containing an inner core (7), with an opening to take a window pane and the like. The outer sheets (5,6) project beyond the outer edge of the core (7) by given dimensions, at set edge zones of the door filling (4). Each of the decorative edge profiles (14-17), for the window opening, form plug bars to clip on to the free edges of the outer door sheets (5,6) with grooves of the same width as the door sheets. A reinforcement body (22), as a quadrilateral profile, is in a positive fit between the door panel sheets (5,6) at the window opening, in front of the free upper surface of the core (7).
