Abstract (en)

[origin: EP1036936A1] The device has an electrical machine (12) acting as a starter and generator, an inverter (14) for converting the current produced or required by the machine and a control unit (30) for controlling the operation of the unit containing the machine and inverter depending on input signals. The control unit can be activated at intervals when the vehicle is not being operated. An additional controller (40) activates or deactivates the inverter depending on motor vehicle operating information.
