Abstract (en)

[origin: EP1037332A1] The connector receives an adapter directly into the rear of the plug facilitating conversion to the alternative coaxial socket fitting. The low voltage connector (1) comprises a number of terminals (11) arranged in pairs, each terminal having a front contact area (12) which is intended to make contact with an associated socket connector and a rear contact area (13) which would normally be connected to wires. In this case the rear contact area co-operates with a contact assembly (23,22) designed to receive an adapter (3a) into which a BNC type connector (4a) may be fitted. The rear contact areas of the main terminals include self-stripping areas to cut through insulation in order to make the required connections.
