Abstract (en)
[origin: DE19738668A1] The invention relates to a device for machining the edges of spectacle glasses, comprising a spectacle glass holder for a rough glass held on at least one side and a machining device for full machining of said glass by means of a separating cut to provide an upper facette, a peripheral groove or grooves which can be used to fasten a spectacle frame using clips or or drill holes and, optionally, to polish the machined surfaces.
