Abstract (en)

[origin: DE19755843A1] The invention relates to an actuating device for an electric lock of a motor vehicle door, which lock is arranged on the inside of the door panel closing the motor vehicle door towards the outside. The invention aims to provide a simple and reliable design which makes it possible to do without mechanically moving parts. To this end a pneumatic actuating element (15) is arranged in a handle shell (12) embodied in the door panel (11), which element (16) controls an actuating element of an electric switch (20) through the door panel. The electric switch opens (20) and closes the circuit for the electric lock.
