Abstract (en)  
[origin: US2002167171A1] The invention relates to a sanitary fitting comprising at least one supply pipe (1, 2) and/or one connecting element (10) for connection to a connecting pipe or a flexible hose, in addition to at least one fitting component (5) with an accommodating opening (3, 4) for the supply pipe (1, 2) or connecting element (10), whereby the supply pipe (1, 2) or the connecting element (10) is provided with a supporting rim (6) which rests against the component (5) and is arranged in the accommodating opening (3, 4) of the component (5) and securely connected thereto (5). In order to connect the supply pipe (1, 2) or connecting element (10) to the component (5) of the sanitary fitting in a simple, economical manner, the supply pipe (1, 2) or connecting element (10, 11) is engaged in the accommodating opening (3, 4) of the component by means of a flange (7) which is located at a specific distance from the supporting rim (6).
