Abstract (en)

[origin: EP1038453A1] Loose particles are captured and removed from a section (36) of the conveyor tube at the filter feed station end. This tube section is configured to follow an upwards curved path (37) at an angle essentially greater than 90 deg. in the transport direction. The particle collection chamber (41) has its bottom region shielded from the pressure zone of this tube section by a cover (43).
