Abstract (en)
[origin: EP1038781A1] The bottle labelling plant has working stations (12, 13, 14) arranged around a carrier and withdrawing devices (2) which swing out to move the bottles in front of each station as it is reached. The guides (18, 19) on the withdrawing devices have lever arms of uniform length and the geometry of the curve of the withdrawing devices is designed so that, at least between the labelling box (13) and the smoothing cylinder (14), the curved surface (2') of the withdrawal device is oriented outwards towards the free space.
