Abstract (en)
[origin: EP1039054A2] The ventilation and/or cleaning process for tanks for fluids containing solids. One or more rotary pumps (2) supply a fluid flow into the tank via several injection nozzles (10) with shut-off devices positioned in front. Individual shut-off devices are opened and closed by a regulator unit in a pattern dependent upon the requirements of the installation, so that individual fluid jets are directed into the tank one after the other. Rotary pumps and/or shut-off devices are regulated via a computer program.
