Abstract (en)
[origin: EP1039072A2] The lock has an actuating handle (9) for connecting via an electromechanical coupling device (15,16,20,21) to an actuating element (B) in engagement with a locking mechanism movable between an open and a closed position. A gearbox in the actuating handle contains the electromechanical coupling device that switches the gearbox between an uncoupled free-running position and a coupled, force transfer position.
