Abstract (en)  
[origin: EP1039079A1] On side of medium plane of bolt (5) and catch (4) where plate (2) of module is not placed, crossbar (6) is placed and has two collars (64, 65), with inner thread. Distance between centers of collars (64, 65) is equal to distance between centers of collars (24, 25) of plate so that screwing of screws (10) inside crossbar collars applies plate against edge (1) of mobile lift. Crossbar is then obstacle against sliding of medium plane of bolt relative to medium plane of catch.
