Abstract (en)
[origin: EP1039238A2] A device for mounting a radiator (3) on a substrate (1) comprises an elongate rail (2), anchorage to the substrate, two bracket members and a spring (7). A first bracket member is disposed at a first end region of the rail and is designed for cooperation with a first region of the radiator (3) or an engagement member thereon. A second bracket member (4) is disposed at an opposite, second end region of the rail, and is designed for cooperation with a second region of the radiator (3) or an engagement member thereon. The second bracket member (4) is movable along the rail (2). The spring (7) biases the second bracket member (4) towards the first. The one end of the spring (7) is connected to the rail (2) and its other end is connected to a locking element (24) which is secured in the second bracket member (4). The locking element (24) is urged against a first side of a wall included in the rail (2). The second bracket member (4) has an abutment member (12) which is disposed on the opposite side of the wall and which maintains the urging of the locking element (24) against the rail (2). <IMAGE>
