Abstract (en)

[origin: DE19756702A1] A roofed enclosure (2) with side walls (3), open grid flooring (15), and end walls (5) fitted with sliding doors (7) has a conveyor track (8) by which a vehicle (1) can be moved in a direction (10) through the doorway. A pair of robotic, high pressure spray units (12,12) are mounted on rails running parallel and spaced apart from the vehicle conveyor. Water at 1000-2800 barg is supplied to the spray units by positive displacement pumps (19). The water is recycled after passing through a separator and filter to remove paint particles.
