Abstract (en)
[origin: WO9932724A1] The invention relates to a substructure for constructions, especially for sports pitches in trough-shaped supporting frames (19) or for sections of stands which are supported on and can be horizontally rolled or slid on recessed tracks (8, 9) in the sub-floor by means of vertical supports (20) mounted underneath with rollers or sliding cushions (4). According to the invention, one or more bridges (22) are provided. Said bridge(s) can be raised by means of hydraulic cylinders supported on pedestals (2) or on pile heads.
