Abstract (en)

[origin: WO9931848A2] The present invention refers to a method, an apparatus and a switch for switching data transferred in circuit switched channels between at least three unidirectional multi-channel time division multiplexed bitstreams that are accessed at respective ports of a switch. According to the invention, data is transferred between said ports in circuit switched channels of a switch internal unidirectional multi-channel time division multiplexed bitstream that is accessed by said ports.
