Abstract (en)
A vehicle passage management system (3) managing a vehicle (2) passing through a toll road (1) has a vehicle side communication device (20) installed in the vehicle (2) and gate side communication devices (30) installed in gates (10) installed at a plurality of positions for coming in and out the toll road (1). The gate (10) has a communication gate (30A) and a check gate (30B). By communication between both of the communication devices, toll of each vehicle or so forth can be calculated without relying on a toll ticket or manpower. When failure is caused in the communication device, entry of such vehicle is inhibited by the check gate (30). <IMAGE>
