Abstract (en)

A telecommunications terminal (11) for accessing a plurality of services (such as e-commerce) in a telecommunications infrastructure (1,2,3) includes a selection facility (22) for choosing a list of actions from a store (21) appropriate to the type of service requested via an input (19) from the user. The invention provides a mobile terminal capable of performing local monitoring tasks and of executing remote tasks in the fixed infrastructure.
