Abstract (en)
[origin: DE19834910A1] The present invention relates to a slipper comprising a moulded sole (2) made of foam which is adapted to the shape of the foot and which comprises a moulded foot bed (20). The side of the foot bed of the moulded sole is covered with a non-woven material comprising an anti-perspiring, antibacterial and/or anti-mycosis finish. The moulded sole is made in the shape of a sock-like sheath (1) for the foot and is connected according to a high-frequency method to the inner side of the sole surface at the level of its side which is opposite to the foot bed. A plurality of fittings are applied on the wear surface and are made of a plastic material that increases the ground adhesion of said wear surface.
