Abstract (en)
[origin: GB2332694A] A panel and frame arrangement 10 includes a panel 12 mounted in a frame 14. Resilient members 16a, 16b 16c, 16d act between the panel 12 and the frame 14 to help set the position of the panel 12 relative to frame 14. The resilient members can also support at least part of the weight of the panel 12 and the member can be located at the comers of the frame. The resilient members can be designed to resiliently bear on the panel 12 in at least two perpendicular directions. The resilient members can be arranged to include end portions which engage the frame 14 and a mid portion which engages the panel 12. The resilient members can be curved in a convex or concave manner, within the frame 14, to receive a corner of the panel and be so formed as to allow ventilation fluids to pass around the edge of the panel 12.
