Abstract (en)  
[origin: WO9932143A1] Thrombosis-initiating chimeric polypeptides and conjugates, where Figure 1 portrays one of the disclosed examples of the latter, are provided, as well as compositions comprising same and nucleic acid constructs encoding same. At least one component of a chimera or a conjugate is specific for one or more external features of the vascular endothelium of vessels nourishing a tumor and at least one thrombotic component is substantially inactive when not associated with said tumor vascular endothelium, permitting specific destruction of cancer cells of solid tumors in an animal.
