Abstract (en)  
[origin: US6357574B1] The invention relates to a conveyor system comprising a guiding rail (6) and a plurality of retaining devices (8) for a conveyed item, especially printing products. Said retaining devices each have a guiding pan (5) which can individually move in the guiding rail (6). A second guiding rail (7) is provided with a driving means (2) which is guided thereon. The driving means (2) permits a detachable coupling to a coupling part of the guiding part (5) such that, in a coupled state, a load carrying connection exists between the driving means (2) and the coupling part.
