Abstract (en)
[origin: DE19757421A1] Disclosed is a stacking device (40), comprising a rotational stacking wheel (10) with a plurality of fingers (14). One end (13) of said fingers is fixed to the periphery of a hub surrounding the stacking wheel axis (26). One locating gap (16) for a sheet-like product (22) is formed between said fingers. The invention is characterized in that the width of the locating gap (16) can be regulated between an open position in which the sheet-like product (22) can be inserted therein and a position in which the sheet-like product (22) is retained.
