Abstract (en)
[origin: WO0019037A1] The invention concerns a threshold bar comprising a base section (20) to be fixed on the floor and a covering section (25) to be fixed with screws (27) on the base section. The covering section comprises a longitudinal tongue (24) with a thickened end part (29), and holes (24) for passing through the screws along an axis parallel to the tongue (24) and offset relative thereto. The base section comprises two longitudinal juxtaposed parallel grooves (21, 22) designed to receive the tongue (24) and the screws (27) passing through the covering section passage holes. The tongue is dimensioned with respect to the groove designed to receive it so as to be able to pivot about a longitudinal axis.
