Abstract (en)

[origin: WO9934083A1] The invention relates to a connector (1) for hollow profiled sections (2) of spacer frames for insulating glass panes. Said hollow profiled sections (2) have at least one linear perforation (3,4) directed towards the interior (15) of the pane. The connector (1) has one or several elastic lugs (9, 10) which engage with the perforation(s) (3, 4) like springs. The elastic lugs (9, 10) are arranged in a recess (11) of the connector (1) and extend approximately to the edge of the recess (11). Preferably, several adjacent elastic lugs (9, 10) are arranged in an offset position in a longitudinal direction of the connector (1).
