Abstract (en)
[origin: FR2772828A1] The closing device (10) for the opening of the oil filling tube, has the free upper end (35) of a cylindrical filling tube (12), designed to receive a cap (16), which carries an annular sealing ring (40) and two lugs (18, 19), which are diametrically opposed, and which pass through the radial cut outs (21, 22) in the central orifice (17) in the annular partition (14), which is fitted into the filling tube. The lower face of the partition carries two locking ramps (30), for locking the cap into position.
