Abstract (en)  
A system for providing clapping therapy, which includes a clapper device (20) having at least one clapper element (24) mounted onto a first elongate support (28); and drive apparatus (41) for selectably imparting to each the clapper element, via the first elongate support (28), a predetermined reciprocating motion, thereby to bring each clapper element into force transfer contact with a portion of a patient, so as to periodically apply a clapping stroke thereto in clapping therapy of the patient. <IMAGE>
