Abstract (en)

[origin: EP1043205A1] A first remote control may be used by send an inhibiting command to the vehicle, to stop the action of a second remote contr The system for controlling access to a motor vehicle (V) includes a remote control (9) carried by and identifying the user, communicating with an identification system (1) installed within the car and controlling the locking of doors (6-8). The remote control (9) includes a memory with a predetermined call button sequence which releases the transmission of an inhibiting signal the unit within the vehicle. This signal has the effect of preventing the authentic identifying signal from another remote unit activating the locking or unlocking system.
