Abstract (en)

[origin: EP1043546A2] The lamp holder has a holder (2) in which the lamp can be pre-mounted and that can be attached to the lamp neck of a reflect (5) with a locking device, whereby the holder has bayonet tongues that can be locked to the reflector's lamp neck. The holder has a plug-in housing (7) and a sprung plate part (14) that holds the housing. The bayonet tongues and the edge section (27) of the housing are made in one piece with the sprung plate part. The edge section contacts the lamp under tension and holds the lamp against the reflector. An independent claim is also included for an arrangement for implementing the method.
