Abstract (en)

[origin: WO9933340A1] A low volatile organic compound co-solvent system is disclosed for preparing emulsifiable concentrates of water-insoluble pesticides having a melting point of less than about 120 degrees C, preferably low melting organophosphorous insecticides wherein serendipitously, the bioefficacy of the insecticide active is significantly enhanced. The co-solvent system comprises a water-soluble alkoxylated fatty acid/rosin acid-nonionic surfactant composition.
