Abstract (en)  
[origin: WO9933533A1] The invention relates to an interactive gaming device (100) which contains information concerning whether the device can be made to award a prize or not. The device comprises means (1, 2, 3, 4, 5, 10, 20, 30, 40, 50, 60, 70) for interaction with a user, and is provided with information unknown to the user concerning how a user is to interact with the device (100) in order for a device which can award a prize to award a prize. This information can consist of information concerning whether the device is a winner or not in a lottery. The means of interaction with a user can comprise a control unit (70), sensors (1, 2, 3, 4, 5) for detecting at least one of the parameters sound, light, temperature, touch, atmospheric pressure and movement of the device, and in addition means (10, 20, 30, 40, 50), for example light emitting diodes, of indicating correct interaction with the device with regard to each one of the parameters which the device is equipped with sensors to detect.
