Abstract (en)

[origin: DE19860930A1] A human beta 2-adrenergic receptor gene sequence where all or some of the bases at positions 159, 245, 565, 934, 1120, 1221, 1541, 1568, 1633, 1666, 1839, 2078, 2110, 2640 and 2826 are changed, is new. An independent claim is also included for a method to determine a disposition for an illness, comprises: (a) isolating a DNA from a proband; (b) at least one altered position is genotyped and compared with a reference DNA sequence, so that all possible variant combinations of single mutations to all possible variant combinations of all variants are included.
