Abstract (en)
[origin: WO9932705A2] A string (2) of pouches (4), each having a tag (14) contained therewithin, is made from a microfilamentous polypropylene fabric which is post-irradiation grafted with a monomer or monomers. The monomer or monomers includes functional groups arranged to be covalently bonded to other compounds or moieties. A method using the string for preparing a library of compounds in a combinatorial technique is also described.
