Abstract (en)
[origin: DE19841158A1] The invention relates to a fuel injector for internal combustion engines, comprising a valve member (7) which can be axially displaced in a hole (5) of a valve body (1) and at its valve stem (7) has a pressure shoulder (15) which acts in the direction of opening of the valve member (7) and protrudes into a pressure chamber (17) which via a pressure channel (21) can be filled with high-pressure fuel. The pressure channel (21) is eccentrically inclined in such a way that the fuel jet exiting therefrom enters the pressure chamber (17) eccentrically in relation to the valve member (7).
