Abstract (en)

[origin: WO0026758A1] A method and system for using non-manual commands, preferably voice commands, to control the actions of a medical image digital display system, eliminate certain job tasks and facilitate a work environment with minimum changes while providing the advantages of digital manipulation. Images are provided to the medical image digital display system to be displayed and controlled by a computer system using non-manual commands that do not require the use of the limbs of the hands or feet. The image may include patient data, history, test data and information in place of or in addition to the image, which can include an X-ray, CT scan, MRI scan or other types of images.
