Abstract (en)

[origin: FR2785413A1] The invention concerns a method whereby an interface (18b) for controlling a computer system is produced from at least one object including descriptions of the object and/or at least one member of the object, by extracting therefrom the descriptions and organising them to translate the meaning of the command into a language understood by the user. The user of said interface does not need to be computer literate and can modify the contents thereof in fields (19) to form command documents (41).
