Abstract (en)  
[origin: WO0026915A1] The automatic device for the delivering of video signals with a high capacity optical disks record comprises a robotized system (1) for the running of DVDs (2), responsible for the recording of films to be broadcasted and of their loading into readers DVD (3) which transfer the content (4) of the DVDs - a film in MPEG2 format for each DVD - towards the output module (5) consisting of cards which, according to the use of the outlets, multiply a plurality of MPEG flows into one or more transport stream MPEG 2 in accordance with the specifications of Digital Video Broadcasting or transform each MPEG flow into a corresponding standard analogic outlet (compound, component or digital non-compressed signal D1), while the check system (6) coordinates the operations of the different components of said system and realized an interface with possible other scheduling or check systems.
