Abstract (en)
[origin: EP1044735A2] A continuously cast endless metal billet is fed directly and continuously into a multi-stand section rolling mill (5). The profile of the cast billet is adapted to that of the finished profile, so that the cast structure of the billet is converted into the rolled structure of the finished profile, with only min. stretching of the billet in the rolling mill. The finished profile passes through a cooling stand (6) and is cut in a cutting stand (7) into lengths, which are a multiple of final lengths for sale. These lengths are stretch leveled, bundled, and cut into lengths for sale in a second cutting stand (12).
