Abstract (en)

[origin: EP1044918A2] The storage appliance such as drum is contained in a mounting frame (4) which has an axle (3) with at least one bearing in w the storage appliance is pivot mounted. The bearing consists of two tubular elements (13), a bore-hole (15) and a cone (14) at o end. The storage appliance has a tubular section (7) holding the axle and possessing a conically widening opening (11) at both e The elements' cone matches the conical ends (12) of the opening in the tubular section. The axle has at least one especially dismantlable clamping element (19) by which the bearing elements are moved and clamped in relation to the tubular section.
