Abstract (en)

[origin: EP1044923A2] The scissors-type elevating platform (1) has at least one pair of scissors elements (3,4) underneath the platform(2) on which objects are lifted up. The scissors elements intersect on a shared pivot axle (5), swivel together, and are raised and erected by drive mechanism. At least one support-arm (16) has a free end (17) movably supported on the second scissors element and position the expander body (6) on the first scissors element. The free end of the support arm is guided by an angled guide-arm (19) which is fixed on the first scissors element with its free end (20).
