Abstract (en)

[origin: EP1045092A1] The window (10) security fitting consists of a first hooked element (28) on the blind frame (12), and a second hooked element (32) on the casement frame (14). The two hooked elements do not engage in an opening direction when the casement is shut, but do engage in a direction (Z) at right angles to the opening direction (X) when the closed casement frame is moved at right angles to the opening direction in relation to the blind frame. At least one blocking element (27) protruding into a locking plate (44) is between the blind and closed casement frames.
