Abstract (en)
[origin: CA2305054A1] A lamp has a lamp body having a first socket and a second socket configured to receive matching bases of a tubular fluorescent light. At least the first socket has a housing that is of such a design that the housing, with a base of the fluorescent tube received and electrically contacted in the first socket, is detachably connected to the lamp body. The detachable connection is a snap connection having a bore and a matching pin that can be secured in the bore by a snap element engaging a locking recess on the pin.
