Abstract (en)

[origin: EP1045475A2] The terminal has a contact frame (11), a contact spring (12) that interacts with the contact frame with a clamping spring br (19) and spring legs (22). The bridge is connected to the U-profile (13) of the contact frame and its spring legs contact thrust blocks on the contact frame. Some or all contact frame U-profile U-legs (15) have protrusions (16) that are deformed outwards to form thrust blocks for contact with the clamping edges of the spring legs. The clamping spring bridge engages the clamping sprin and has arms (20) fed outwards over the edges of the U-profile legs.
