Abstract (en)

[origin: WO0027592A1] The invention relates to a workpiece-holding device (1) for a blasting installation which operates by blasting workpieces (3) with blasting material in a blasting compartment (4), said blasting material being propelled into the blasting compartment (4) by means of at least one blasting material acceleration device (5). The workpiece-holding device (1) is also rotated about a main axis of rotation (8) by means of a driving element (7). According to the invention, at least one workpiece-receiving element (9) is provided. Said workpiece-receiving element (1) is mounted in the workpiece-holding device (1) in such a way that it can rotate about a secondary axis of rotation (10, 11, 12, 13) located outside the main axis of rotation (8). By using this workpiece-holding device, it is possible to obtain especially a better surface quality of workpieces and use the blasting installation more economically.
