Abstract (en)
[origin: WO9935717A1] An electric connector (1) having an insulating casing (3) defining a number of cavities (6) for housing respective electric terminals (7); a retaining lever (35) carried by the casing (3) and having a first retaining tooth (37) which snaps onto a second retaining tooth (36) carried by a connecting element (1') connectable to the connector (1); and connecting means (34) connecting the retaining lever (35) in oscillating manner to the casing (3) to enable release of the first and second retaining tooth (37, 36) and disconnection of the connector (1) and the connecting element (1'); the connecting means (34) having a beam element (38), which is fitted integrally at opposite ends to an outer wall (11) of the casing (3), carries the retaining lever (35), and extends crosswise to the retaining lever (35).
