Abstract (en)

[origin: EP1046369A1] The valve has a valve housing (1) with a single liquid inlet (6) and 2 liquid outlets (7,8), with a valve element (3), moved the liquid flow from a position in which it blocks the liquid inlet, into a position in which it blocks one of the liquid outlet The movement of the valve element towards one or other liquid outlet is controlled via an electromagnetically-operated setting element (4), e.g. by exerting a magnetic force on the valve element which contains a magnetic material.
